

# INTERCONNECT LEADS - ULTRA SERIES

The requirement and demand to have quality Audio Video is increasing rapidly. The Ellies ULTRA Home Entertainment Series can be used for various types of home, home theatre, car and commercial AV installations. All products in this Series are packed in a high quality, durable and transparent heat sealed blister pack with the Tear-Open feature for easy opening. Each pack is clearly marked, with an easy to understand connection guide on the back of every pack.

- All cables/leads in this Series offer a pure oxygen free copper centre conductor, which ensures high conductivity, low electric resistance, good signal transmission, resulting in lower loss.
- Solid PE or foamed PE is used as the dielectric, the video cables characteristic impedance is true 75  $\Omega$ , thus ensuring superb image quality with high stability and fidelity. The Audio cables have a lower capacitance which ensures greater sound quality.
- Using shielded OFC spiral (braiding) or aluminium foil and spiral (braiding) ensures minimal circuit interference allowing for a high signal to noise ratio to be obtained.
- Soft, highly flexible and durable grey PVC outer jacket looks elegant and provides protection against twisting or bending.
