

ProDig-5 TV Explorer

The TV EXPLORER has been designed for the installation and maintenance of terrestrial, satellite and cable TV systems

The TV EXPLORER automatically provides you with all the available information for channels in the network and their quality. It does not require any preliminary information about the signals to be measured. It can detect the type of signal, the standard, the modulation type, symbol rates, etc.

The TV EXPLORER's compact and rugged construction makes it ideal for field use. A 5" colour LCD shows the measurements and picture of non encrypted (FTA) analogue and digital channels.

The TV EXPLORER makes the analyser a much more intelligent and easy to use tool!

**Cable
QAM
Satellite
QPSK
Terrestrial
COFDM**
